A method is given for electrodepositing gold-nickel
alloy from mixed aqueous solution of alkali gold cy-
anide and alkali nickel cyanide, of which gold and
nickel are in the ratio of above 1:5.

the nucleus, and to cases where alkali is added or when
heated. This method was next applied to chromium

Electrochromatography was used with the objective of
mutually separating complex ions of the same metal
with two or more different electric charges. In this in-
stance, various chromium oxalate complex compounds
of known charges were synthesized, and changes and
shiftings on the filter paper during electric conduction
were observed. It was found as a result that chromium
complex ions do not decompose but that both negative

dicyandiamide and alcohol in the presence of dry hydro-
chloric acid at room temperature. When conducted at
a relatively high temperature in the presence of a con-
centrated acid, this reaction proceeded further and
